

# **Environmental Policy Statement**

*Dear Colleagues and Partners,*

Carbo One Limited as the Company that sells one of the main energy resources - coal - feels obliged to contribute to the protection of the environment and in every possible way to minimize the possible adverse effects of activities related to the consumption of coal products.

Good environmental stewardship is fundamental to our community, key to the long-term success of our business. Carbo

One Limited seeks to establish and sustain a positive environmental legacy for itself, its employees, community and for future generations. In doing so, the Company is committed to minimizing its overall impact on the environment while encouraging and activating environmentally responsible behavior on the part of employees, guests and business associates throughout the world.

Specifically, Carbo One Limited aims to conserve water, energy and ecosystems; to reduce greenhouse gas emissions; to minimize waste and to inspire public consciousness in support of environmental sustainability. The Company seeks to identify, measure and understand the direct and indirect impact of its operations and develop innovative and realistic solutions for mitigating those impacts. It also complies with, and in some cases exceeds environmental laws and regulations.

## *Coal and environment*

Coal mining raises a number of environmental challenges, including soil erosion, dust, noise and water pollution, and impacts on local biodiversity. Many types of negative environmental impacts can be minimized, but can not be eliminated even with the best mining equipment without the voluntary execution of ecological programs.

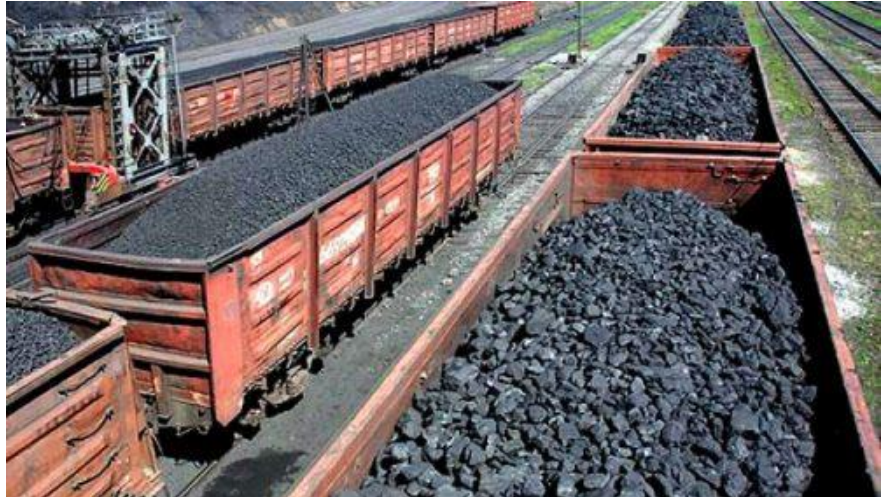

Analysis of the status of environmental activities in regions of mining of coal and its processing shows that currently the bulk of the technical decisions and actions aimed at neutralizing and eliminating the consequences of the activities of mining, rather than on exclusion of the reasons of negative consequences.

Despite the fact that Carbo One Limited is coal trading company but not coal mining, it takes steps to minimize these impacts taking part in various environmental activities and programs all over the world.

In addition, the Company as a trader in process of compliance of new coal suppliers and new customers, pays attention to the presence of policies on environmental protection, as well as measures to reduce the negative environmental impact that our suppliers and customers are taking.

## *Coal transportation and the environment*

As a trading company, Carbo One Limited pays great attention to environmental transport process of coal sold. The Company attracts only the vehicles (vessels, trains and carriages) which satisfy the modern standards and local and international regulations.

Carbo One Limited intend on the using of modern and environmentally friendly fuel and its economy by the carrier of our coal.

The existing contracts of Carbo One Limited provide for sanctions against the carriers in the form of a fine or immediate replacement of the vehicle if it does not comply announced environmental requirements

Besides, as the way of transportation of coal usually runs near the settlements, fields and forests, the Company transports coal only by the ways allowing to prevent the loss of soil fertility and accumulation of harmful substances in agricultural production in the areas adjacent to the road.

## *Water and Energy Conservation*

Most industries require water at various stages of production of goods and products. Water is used in industries in both consumptive and non-consumptive ways.

Water conservation encompasses the policies, strategies and activities to manage fresh water as a sustainable resource, to protect the water environment, and to meet current and future human demand.

Energy conservation refers to reducing energy consumption through using less of an energy service.

One of the main ecological goal of Carbo One Limited is to improve water and energy efficiencies in existing operations. The way to do this is to invest in new technologies and systems that enhance water and energy conservation. We also advocate the including water and energy management as an integral part of planning for future projects to reduce the consumption of water and energy for every company.

## *Waste Minimization*

Waste minimization is a process of elimination that involves reducing the amount of waste produced in society and helps eliminate the generation of harmful and persistent wastes, supporting the efforts to promote a more sustainable society.

Waste minimization is one of the most important interventions that can help sustain industrial production without compounding onslaughts due to pollution on environmental sinks. The importance of this intervention cannot be overemphasized.

Carbo One Ltd uses the following ways to reduce the amount of waste:

- Transfer of waste for processing to third parties
- Use of recycled products if possible
- Selection of household waste
- Duplex print of documents as possible
